

Modifier -25:

Used to indicate a significant, separately identifiable evaluation and management (E/M) service by the same physician on the same day of the procedure or other service. Documentation must clearly support the additional E/M service beyond the usual pre- and post-operative care.

Modifier -59:

Indicates a distinct procedural service. It is used when two procedures are performed in the same session but are not typically reported together. This modifier is often misused and should only be applied when no other modifier is more appropriate. Documentation must support that the services are separate and distinct.

Modifier -76:

Used to report a repeat procedure or service by the same physician or qualified healthcare professional subsequent to the original procedure. This modifier is appropriate only when a procedure needs to be repeated due to medical necessity. It does not apply to repeated diagnostic testing that should instead use modifier -91.

Modifier -24:

Denotes an unrelated E/M service by the same physician during a postoperative period. This modifier is used when a physician performs an E/M service during the global period of a surgical procedure that is unrelated to the original surgery. The documentation must clearly state the reason and medical necessity.

Modifier -22:

Indicates increased procedural services. It is used when the work required to provide a service is substantially greater than typically required. Documentation must include a detailed explanation and

support the additional effort, time, or complexity.

Modifier -91:

Used to indicate repeat clinical diagnostic laboratory tests. It is only appropriate when a test is repeated to obtain subsequent (multiple) results and not when the test is rerun due to a problem with the specimen or equipment.

Modifier -GA:

Indicates that a waiver of liability statement is on file. This modifier is used when physicians or suppliers expect that a service will be denied as not reasonable and necessary and the patient has signed an Advance Beneficiary Notice (ABN).

Modifier -GZ:

Used when no ABN was given to the patient. This modifier is appended when providers believe a service will be denied and no ABN was obtained. Claims billed with this modifier will automatically be denied.

Modifier -XU:

Used to describe unusual non-overlapping services that are not usually reported together but are appropriate under the circumstances. This subset of modifier -59 should be used when the component services are distinct and performed separately.

Modifier -XP:

Separate practitioner. A service that is distinct because it was performed by a different practitioner.

Modifier -XS:

Separate structure. A service that is distinct because it was performed on a separate

organ/structure.

Modifier -XE:

Separate encounter. A service that is distinct because it occurred during a separate encounter.
